Dear Hiring Manager:

With each previous role I have held, I strived to further the success of my employers while growing my skill set. In my most recent position, I led the Front-end development of the Continuous Vulnerability Management feature that assisted Adlumin in becoming a [key vendor for the 2022 MES Matters list](#).

While employed at Specialty Food Association, I collaborated with the Senior Solutions Architect and a third party consulting firm to develop a program that automated the delivery of annual membership dues invoices to over 2000 businesses. Before we created the automated process, they mailed the invoices to each business. The small membership team felt overwhelmed. SFA was scaling and the membership team was having difficulties mailing each letter.

This difficult but rewarding project reduced the membership team's workload. Completing this project aided in retaining essential businesses to finance a charitable event called the Winter Fancy Food Show. At the Winter Fancy Food Show of 2022, the Specialty Food Association donated [8,573 pounds of food to help support Las Vegas-based charities](#).

My experience in Software Engineering has taught me to encourage a sense of shared responsibility in all of my leadership positions and to embrace tough challenges. I am eager to learn more about the company from your perspective and to speak to you about my background in higher detail to see if we find a mutual fit. Thank you for your time.

Sincerely,

Myco Davenport
